

④ **Secvest IP display-inlay  
Printing-template**

**Guidelines and printing-advice**

1. Type the description for the wireless components of your Secvest IP directly into the boxes in this pdf (for example "SD Hallway" or "MD basement").
2. Print the document. Use glossy photopaper with a weight of about 120g/m<sup>2</sup> for ideal results.  
Activate "High Quality Printing" in your printer's options.  
**Important:** Do not change the scale and proportions of the document! Deviation from the original scale (100%/1:1) will cause the inlay to not fit into the panel of your Secvest IP properly anymore!
3. Let the printout dry for a moment.
4. Cut the inlay out along the white lines.  
**Caution:** Do not cut the tab off unintentionally!
5. Put the inlay into the panel of your Secvest IP.
